Project description:

The Action aims at supporting the development of modern irrigation by addressing sectorial constraints related to water storage, irrigation infrastructures, land consolidation and access to extension services and credits, through both technical assistance and investment. It targets Ararat and Armavir marzes which, with a population of around 500 000 and about 65 % of irrigable land, have the potential to bring a significant leverage to the modernization of agricultural production in Armenia.

Component 1: Institutional support to national and local stakeholders involved in the irrigated agriculture sector:
Institutional support to the Ministry of Agriculture;
Support to the State Committee of Water Economy ("SCWE"):
Public policies and reforms on water management and irrigation efficiency;
Technical, institutional and social engineering of water resources and irrigation networks;
Knowledge, information and monitoring system;
Support to the creation and operation of two Mobile Extension Service Platforms ("MESP");
Support to the development of cooperatives.

Expected results:

1. Modernization of around 2 000 ha irrigated pilot areas;
2. Technical and financial support to 20 production cooperatives and farmers' groups in these pilot areas;
3. Development of around 10 land consolidation operations in these pilot areas;
4. Creation of 3 AEST;
5. Three coordination meetings of the Steering Committee during the implementation of the Action.
